Company Model:
CompanyName, firstName,lastName, mobile,email, HeadCount, location.

Validation:
- CompanyName
  @NotEmpty(message = "Company name can't be null")
  @Size(min=3,message= "Company name must be more than 2 characters ")
  @Pattern(regexp ="^[a-zA-Z0-9]+$" ,message="should contain at least one letters")
  (This depends on the Saudi Ministry of Commerce system.)

- firstName
  @NotEmpty(message = "first name can't be null")
  @Size(min=2,message= "first name must be more than 1 characters ")
  @Pattern(regexp ="^[a-zA-Z]*$" ,message="should contain letters only")

- lastName
  @NotEmpty(message = "last name can't be null")
  @Size(min=2,message= "last name must be more than 1 characters ")
  @Pattern(regexp ="^[a-zA-Z]*$" ,message="should contain letters only")

- mobile
  @NotEmpty(message = "mobile can't be null")
  @Pattern(regexp = "^05\\d+$", message = "Phone number should start with 05 ")
    @Size(min=10,max = 10,message = "Phone number should consists of 10 digits")
  (it accept only saudi number)

- email
  @NotEmpty(message = "email can't be null")
  @Email(message = "Email not valid")

- HeadCount
  @NotNull(message = "HeadCount can't be null")
  @Positive(message = "HeadCount should be positive number")

- location
  @NotEmpty(message = "location can't be null")
  @Pattern(regexp ="^[a-zA-Z]*$" ,message="should contain letters only")
  @Size(min=3,message= "must be more than 2 characters ")
  (the location mean cities, it should be a list exist in the database of system to check it's validation)
